### **EXAMINER'S AMENDMENT**

[1] An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312.

To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

[2] Authorization for this examiner's amendment was given in a communication with Mr. Chris Comuntzis (Reg. No. 31, 097) on December 24, 2009.

The application has been amended as follows:

[3] In Claim 1: Please replace the entire claim text with the following:

1. A computer implemented method of measuring the differences between a first video signal and a second video signal, said method comprising:

processing the first and second video signals with a sensory emulation process and a subjective emulation process, the sensory emulation process modeling the physical sensitivity of the human visual system and the subjective emulation process modeling the subjective significance of any errors present in a video signal;

analyzing the processed video signals to identify perceptually relevant boundaries and disregarding perceptually irrelevant boundaries of video images depicted therein;

comparing only said perceptually relevant boundaries so defined in the first signal with those in the second signal and disregarding said perceptually irrelevant boundaries, the comparison including determination of the extent to which the properties of boundaries defined in the first image are preserved in the second image; and

Art Unit: 2624

generating an output indicative of perceptual difference between the first and second signals.

[4] In Claim 12: Please replace the entire claim text with the following:

12. Apparatus for measuring the differences between a first video signal and a second video signal, said apparatus comprising:

processing means for processing the first and second video signals with a sensory emulation process and a subjective emulation process, the sensory emulation process modeling the physical sensitivity of the human visual system and the subjective emulation process modeling the subjective significance of any errors present in a video signal;

analysis means for analyzing the processed video signals to identify perceptually relevant boundaries and for disregarding perceptually irrelevant boundaries of video images depicted therein;

comparison means for comparing only said perceptually relevant boundaries so defined in the first signal with those in the second signal and disregarding said perceptually irrelevant boundaries, the comparison including determination of the extent to which properties of boundaries defined in the first image are preserved in the second image; and

means for generating an output indicative of perceptual difference between the first and second signals.

[5] In Claim 20: Please cancel claim 20.

### **REASONS FOR ALLOWANCE**

[6] The following is an examiner's statement of reasons for allowance: The instant invention is related to image quality measurement.

Art Unit: 2624

[7] Prior art was found and applied in the prior actions. Applicant claimed a combination of features for which there is no reasoning to combine the prior art references in order to arrive at the claimed invention.

[8] Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

[9] Claims 1-19 are allowed.
